

Usually the festival part consists of two events – the awarding ceremony and the forum part (seminars, exhibition, show events, concerts).

During the awarding ceremony all the nominated projects in each category are presented. As already mentioned, the winners in each category, as well as the winners of special awards are announced and awarded. Traditionally, President of Bulgaria, Minister of Education and Science, Minister of Culture, managers of Microsoft Bulgaria, Apple - Bulgaria (BBS), Adobe - Bulgaria, Information Services and many others participate and bestow prizes on the winners. The ceremony is accompanied by a rich and interesting show program.

The seminars are carried out for several days. The accents are on various topics from different spheres of the computer art and technology. The participants in these seminars are from all over the world, and the lecturers and their topics are carefully selected by the organizers of "Computer Space". Everyone who wants to participate in the seminars can check the [Festival part participation rules](#). This year's seminar program could be found in the [Events Schedule](#) section.
